Richard B. Allen

Fishery Management Consulting and Vessel Operations

Major Accomplishments:

- Facilitated agreements between trawlers and lobster trap fishermen that reduced gear conflicts and allowed both gear types to share common fishing grounds.
- Led a regulatory reform campaign that brought the U.S. Atlantic squid fishery under management.
- Organized a series of regional lobster industry workshops that led to the development of the current co-management system of Lobster Management Areas and Lobster Conservation Management Teams.
- Initiated and led a plan development process through which the offshore lobster fishing industry produced a lobster conservation program that has served as the model for plans that have been implemented in 6 of the 7 lobster management areas.
- Served on the Sea Scallop Committee of the New England Fishery Management Council that developed an effort control plan that led to the rebuilding of the sea scallop resource and fishery.
- Conducted and supervised research and outreach projects that have enhanced the capability of fishery stakeholders to participate responsibly in the fishery management process.
- Provided science-based representation of the fishing industry in a variety of symposia and workshops on marine reserves.
- Served as the policy advisor to the Atlantic deep-sea red crab fishing industry in the development of the red crab fishery management plan. Developed an innovative mechanism through which the red crab industry was able to reduce excess capacity in the red crab fleet through private contracting.

Education:

- Completed course work for Ph.D. in Environmental Sciences, 2007, University of Rhode Island
- Master of Marine Affairs, 1973, University of Rhode Island.
- B.S., 1972, URI, High Distinction.
